

HCS Resource Tracking System

The HCS Resource Tracking System (RTS) allows health care facilities to efficiently manage and track their resource materials. With the swipe of a member's magnetic striped identification card, the health care facility quickly finds the member in the database. Then, by scanning the resources unique bar coded label, the health care facility now has an electronic record of the transaction. Not only can the RTS program track the resources, it has the capability to print a check-out receipt, generate late notices, and maintain a log of calls and letters to members with past due resources.

RTS has various built in reports, from generating over due letters to resource usage, to membership check out history. In addition to the built in reports, customized reports can be built.

HCS Membership Management System

The HCS Membership Management System (MMS) allows health care facilities to effectively and adeptly manage their various membership programs. By issuing identification cards to their members, the health care facilities can track the attendance of their members to various events, programs, clinics, etc., allowing them to determine the popularity of program offerings and verify a membership is current and paid in full.

The MMS program also has some unique features. It has the ability to import an Inpatient Report and generate a list of all members who are currently in the hospital. In addition, it can also import a file containing all hospital patients that have passed away. This import file will be used to update the membership database for future use. The MMS program has the ability to export the database in any customized manner. Not only are the above reports included, but the program is designed to allow the health care facility to create their own customized reports.

HCS's Resource Tracking System and Membership Management System programs are flexible. They can be utilized together or separately, and with either our High Capacity or Easy Access Patient Card System. All of our products are customized for each health care facility, allowing each facility to customize the program to their specifications.
